#### **Product description**

When the chicks have hatched from the egg, you can start providing them with 1075 Alfastart chick feed from the second day. Alfastart chick feed is a high-quality chick starter feed for the first three weeks of their life. It is a complete meal with added pellets and tiny shrimp. Thanks to the mini pellets, this feed is particularly suitable for (the small beaks of) chicks. The dried shrimp (gammarus) we add to this feed makes it extra enticing for the chicks to start eating, and they quickly accept the feed and begin eating. Furthermore, the feed contains a balanced protein content, providing good support during the initial growth.

## Feeding advice

- feed fresh food daily, no more than the chicks or chickens can eat.
  This prevents selective eating behavior
- make sure there's always enough stomach gravel and chicken grit, unless the chicken grit is in the total feed
- give fresh water every day

#### Questions about this food?
