

9501 garvolife (1L)

additional animal food to support the balance in the gastrointestinal tract

Available packaging:

1 kg

Product description

Healthy intestinal flora is crucial for a healthy animal. Many external complaints in animals are caused by a reduced functioning of the digestive system. 9501 garvolife contains (good) bacteria. These bacteria take away the breeding ground for excess bacteria, fungi and toxins.

These excess bacteria, fungi and toxins cause an imbalance in the gastrointestinal system, a reduced digestion, and a reduced absorption of nutrients. By taking this away, the balance in the digestive tract will be restored. This ensures that the animal resistance becomes stronger in a natural way.

Feeding advice

- Garvolife can (if possible) be given directly in the mouth, mixed with food or water or sprayed over the animal.
- preventive maintenance: 10 ml / kg of feed or / L of water
- during moulting or illness: 50 ml / kg of feed or / L of water
- spraying: 1 : 4 ratio with water
